

Paper Airplane Instructions

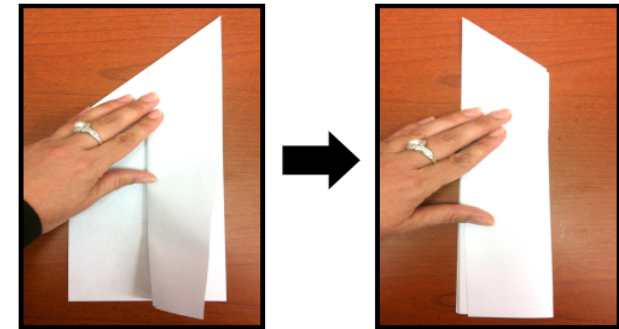

1. Fold sheet of 8.5" x 11" in half lengthwise and then unfold the paper.

2. Fold the two top corners to make a triangle at the top of the page.

3. Fold the paper again in half lengthwise.

4. To make wings, fold one side back lengthwise as shown; then flip over and repeat.

5. Paper airplanes can be adjusted to fly better. Try adding a paper clip to adjust the weight. If the plane climbs sharply, then slows down and drops, move the paper clip forward. If the plane dives sharply to the ground, move the paper clip backwards.
